Footnotes:

1NS, not specified; type 1 and type 2, subjects with type 1 and type 2 diabetes; AUC, area under the curve. Serving sizes in grams unless specified otherwise.

2The published tables show GI values based on glucose=100 or on white bread=100.

3Estimated by multiplying the food's listed GI value with glucose as the reference food by the g carbohydrate per serving and dividing by 100.

4Human Nutrition Unit (Sydney University, Australia), unpublished observations, 1995-2002.

5The low GI may be explained by the inclusion of rolled oats in the recipe.

6Portions of the test food and the reference food contained 25 g carbohydrate.

5V Lang (Danone Vitapole Company, Le Plessis-Robinson, France), unpublished observations, 1996-2000.

8GI calculated from the AUC for glucose.

9GI calculated by using a mathematical formula based on results from an in vitro starch hydrolysis assay.

10Impaired glucose tolerance.

11Both the test food and the reference food contained 75 g carbohydrate.

12Both the test food and the reference food contained 100 g carbohydrate.

13Values based on 0.5 g carbohydrate/kg body wt.

14AUC measured over 3 h for only 5 time points (0, 30, 60, 120, and 180 min).

15GI corrected for added milk and adjusted to represent a 50-g carbohydrate portion size.

16Made from raw oats that were cooked for 20 min.

17Used as reference food and given a GI of 100. The GI of the test food was measured by expressing the glucose AUC value for the test food as a percentage of the AUC value for wheat chapatti.

18GI calculated from AUC food/AUC glucose formula. The AUC value was calculated over 3 h for 5 time points only.

19J Dzieniszewski, J Ciok (National Food and Nutrition Institute, Poland), unpublished

observations, 1996-2001.

20J Brand-Miller, S Holt (Sydney University, Australia), and V Lang (Danone Vitapole Company, Le Plessis-Robinson, France), unpublished observations, 2000 and 2001.

21M Champ (INRA, France) and V Lang (Danone Vitapole Company, France), unpublished observations, 1998.

22AUC measured over 3 h for only 4 time points (0, 1, 2, and 3 h).

23AUC calculated as the area above fasting to 3 h only.

24AUC measured over 5 h, but blood samples taken at hourly intervals only.

25Potato used as reference food with a GI fixed at 80. The GI of the test food was calculated by expressing the test food's glucose AUC value as a percentage of the potato's AUC value.

26White rice was used as the reference food, but glucose was also tested and had a GI of 122. The observed GI was multiplied by 100 and then divided by 122 to convert it to a GI on the glucose scale (ie, glucose = reference food with a GI of 100).

27Blood glucose measured at 30-min intervals.

28GI for sugars calculated from the glycemic response for a meal of sugar and rolled oats minus the glycemic response for the oats alone.

29Both the test food and the reference food contained 30 g carbohydrate.

30Total weight of the test food was 25 g, whereas reference food contained 25 g available carbohydrate. The carbohydrate content of the test food was assumed to be 100% available, which may be an overestimate.

31Eaten as part of a mixed meal with fish, tomato, and onion sauce.

32AUC measured over 2 h for 4 time points (0, 30, 60, and 120 min).

33AUC measured over 4 h for only 6 time points (0, 30, 60, 120, 180, and 240 min).

34Both the test food and the reference food contained 45 g carbohydrate.

35Reference food was an ordinary corn flour arepa.
